Assignment Name: Data Modeler

Aim: To design a MongoDB schema for a blogging platform.

Introduction:

MongoDB is a NoSQL database where data is stored in the form of documents. A schema defines how data is organized in collections. In this assignment, we design a schema for a blogging platform.

Collections:

Collections Used:
1.Users
2.Posts
3.Comments

User Schema:

User Collection:

```
{
  _id: ObjectId,
  name: String,
  email: String,
  password:
String,
  createdAt: Date
}
```

Discription:

This collection stores blog posts. Each post is associated with a specific user through the userId field, which acts as a reference to the user who created the post.

Post Schema:

Post Collection:

```
{
  _id: ObjectId,
  title: String,
  content: String,
  userId: ObjectId,
  createdAt: Date
}
```

Description:

This collection stores blog posts. Each post is linked to a user using userId.

Comment Schema:

Comment Collection:

```
{
  _id: ObjectId,
  text: String,
  postId: ObjectId,
  userId: ObjectId,
  createdAt: Date }
```

30-03-2026

Description:

This collection stores comments. Each comment is linked to a post and a user.

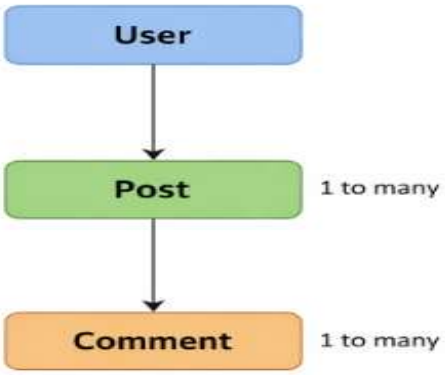
Relationships:

- One user can create many posts

- One post can have many comments

- Each comment belongs to a user and a post

Diagram:



Result:

Successfully designed MongoDB schema for a blogging platform.
